INDICATIONS AND USE

External treatment of inflammations in bovines, equines, ovines, caprines, Porcines and canines. Excellent adjuvant in the treatment of mastitis and postpartum edema. Very useful in the treatment of mastitis and postpartum edema. Very useful in the treatment of sprains, dental distensions, contusions, arthritic, rheumatic and abscesses.

CLINICAL PHARMACOLOGY

• DRUG KINETIC:

The active principles, when contained in a petroleum excipient are not absorbed into the body, they simply act at skin level reaching intermediate strata where nerve endings are located, resulting in an analgesic and anti-inflammatory effect.

Methyl salicylate, eucalyptus oil and turpentine oil cause a rubefacient effect, increasing irrigation of the application zone, obtaining an antiinflammatory and beneficial warmth effect.

DOSAGE

Apply an abundant quantity of the product directly to the inflamed or injured area, giving a rotary massage during a few minutes to allow medicine to penetrate. Repeat treatment every 12 to 24 hours as needed until injury heals based on veterinarian's opinion.

ROUTE OF ADMINISTRATION: TOPICAL

WITHDRAWAL PERIOD:
